DEEPAK YADAV

B.Tech (Information Technology)

Full Stack Developer (MERN Stack)

Gorakhpur, Uttar Pradesh, India | +91 9044792856 | deepakyaduvanshi1256@gmail.com | linkedin.com/in/deepak-yadav1256 | github.com/deepakyaduvanshi1256

SUMMARY

Full Stack Developer (MERN Stack) with hands-on experience architecting and shipping production-grade web applications using MongoDB, Express.js, React.js, and Node.js. Skilled in building secure REST APIs, JWT-based authentication, and role-based access control with a track record of engineering concurrency-safe backend logic that prevents race conditions in transactional workflows. Completed a 6-month Full Stack Development Internship at Techpile Technology, shipping 4 production-ready feature modules across 8 API endpoints using Git version control and Agile workflows. Strong foundation in Data Structures, Algorithms, and Database Management Systems with a proven ability to write clean, scalable, and well-documented code.

SKILLS

Languages: JavaScript (ES6+)
Frontend: React.js, HTML5, CSS3, Bootstrap, Responsive Web Design, Axios
Backend: Node.js, Express.js, RESTful API Design, JWT Authentication, MVC Architecture
Real-Time Communication: WebSocket, Socket.IO, Real-Time Chat, Typing Indicator, Online/Offline Users, Rooms
Databases: MongoDB, Mongoose, SQL
Security: bcrypt Password Hashing, JWT, Role-Based Access Control (RBAC)
Tools & Practices: Git, GitHub, Postman, VS Code, CRUD Operations, API Testing
Soft Skills: Communication, Time Management, Decision Making, Team Collaboration

EXPERIENCE

Full Stack Development Intern (MERN Stack) — Techpile Technology *March 2026 – August 2026*

- Independently built 4 responsive feature modules end-to-end using React.js, Node.js, Express.js, and MongoDB during a 6-month internship, delivering working capabilities across both frontend and backend.
- Designed and implemented 8 REST API endpoints, integrating frontend components with backend services to support full CRUD functionality.
- Secured all API endpoints with JWT-based authentication and role-based authorization, strengthening application security and access control.
- Implemented **real-time communication using Socket.IO**, building features such as **real-time chat, typing indicators, online/offline user status, and rooms**.
- Collaborated with the engineering team using Git and GitHub for version control and code review, maintaining a clean commit history under an Agile workflow.

PROJECTS

FreelancingPortal – Freelance Marketplace & Bidding Platform / *React.js, Node.js, Express.js, MongoDB, JWT, bcrypt*

- Architected a freelance marketplace connecting clients and developers across **3 user roles: Admin, Client, and Developer**, supporting project posting, competitive bidding, hiring, and project completion.
- Engineered a **token-based bidding system** using atomic MongoDB $inc operations with balance validation to prevent race conditions during simultaneous bid submissions.
- Implemented **concurrency-safe bid acceptance** using conditional findOneAndUpdate queries, ensuring exactly one developer is assigned per project while automatically rejecting other pending bids.
- Secured **20+ REST API endpoints** using JWT authentication, bcrypt password hashing, and **role-based access control (RBAC)** across Admin, Client, and Developer workflows.
- Built **real-time in-app notifications** for 5 event types—bid received, bid accepted, bid rejected, project assigned, and account blocked—along with an admin moderation panel and token-package wallet top-up flow.

Faculty Brief – Smart Daily Abstract / *Node.js, Express.js, MongoDB, EJS, HTML, CSS, JavaScript*

- Developed a web application enabling faculty to **publish and manage daily academic briefs** for students using **Express.js, MongoDB, and server-rendered EJS views**.
- Designed backend routes and MongoDB schemas following **MVC architecture**, supporting all **4 core CRUD operations** for creating, viewing, updating, and deleting daily briefs.
- Built **dynamic EJS templates** with reusable views for creating and displaying academic abstracts, maintaining a structured and maintainable server-rendered application.
- Implemented **MongoDB data management** for storing and retrieving faculty briefs, maintaining organized academic records.

EDUCATION

B.Tech in Information Technology — Buddha Institute of Technology, Gorakhpur (AKTU) *2023 – 2027*
Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks
Certifications: Machine Learning Certification — Coursera (2025), organized by Softpro India Computer Technology (20+ hours).
Frontend Development Certification — Simplilearn SkillUp ----Training in HTML5, CSS3, JavaScript, React.js, responsive web design, DOM manipulation, and component-based development.
